inept when compared to the shamanism of even such marginal areas as California. In other words, despite local theory, I observed nothing that impressed me as real possessionalism.*

There were also in Atimelang certain individuals who had attacks of hyperactivity. One of these was mentioned in connection with obscenity on page 157. Another case was of a woman who began shouting and joking in a loud and apparently compulsive fashion and sometimes accompanied her conversation with a rhythmic jumping up and down. On occasions of this sort people said that their familiars had risen within them (*betimang bonin mirang*). This is the same phrase used in connection with seers. Such attacks usually provoke a good deal of amusement among younger people, but older ones are inclined to discourage any teasing or response that might prolong the attack.

Again from observation the attacks of hyperexcitability in these two women in no way suggested trance conditions. Accounts of people considered insane, which will be discussed later, gave no indication that they were in trance states. In other words, I very much doubt that deep trances occur except as rare individual aberrations. They are certainly not induced deliberately nor are they culturally prized. It is quite possible that real trances would be associated with the type of "death" that was thought to occur in delirium and coma, and such an association may have helped to check the introduction of such trances from other cultures. If such is the case, it would also serve to cut down the impressiveness, and therefore the potential power, of seers. Lastly, the danger of losing one's normal personality would seem to offer a possible explanation for the lack of interest shown by Atimelangers in intoxicants. The use of palm wine is known among the coastal peoples, and the requisite palm grows in the mountains; but the mountain peoples do not use it, or even indulge in palm wine during protracted visits to the coast.

It is also interesting that one case of possible suicide, a person who was obviously insane, revolved around this same theme of spirit possession and premature burial. I quote a detailed account for the light it throws on the subject.

The narration referred to an event that occurred about fifteen years ago and began with Fanseni's accidentally offending an evil spirit who lived near his maize field. Some two months later, when the maize was being carried back to his house for storage, signs of abnormality were first noted. Fanseni complained of a violent headache and refused to eat,

* A detailed study of the trance was not made. It is possible, of course, that seers were in a subtrance. By this I mean that conscious control is not lost, but that an emotional condition exists in which the person deliberately shuts out many external stimuli.

manic behavior there was much sly humor. In fact, all of these cases were frequently sources of considerable amusement to bystanders.

Probably all these persons were of the manic-depressive type. This psychosis is much more obvious and socially disturbing than certain other mental illnesses, which may account for the emphasis on them. Whether or not the individual's behavior is correctly reported, it is interesting that informants all stress as symptoms of insanity violence, both against people and property, obscenity, and scatologic behavior.

To summarize and to repeat the linkage among all the phenomena so far discussed, we find that spirit possession is associated with hyperexcitability and in its severer forms with manic episodes containing only poorly disguised suicidal impulses, although suicide is not institutionalized. Further, spirit possession in certain types of illness is interpreted as death and leads to the burial of live persons. All these factors may serve to keep toned down the avowedly possessional faculties of seers so that there is considerable doubt about true trance and a general lack of impressiveness in seers' performances, which, in turn, may be factors contributing to their lack of marked social recognition. Lastly, the attitudes and dangers clustering around spirit possession may explain the resistance to intoxicants.

## BURIAL

All these digressions lead finally to actual behavior connected with death and burial. When a person dies, the male lineal kin set out immediately to secure the shroud and as many contributions as possible in mokos, gongs, pigs, and food. The shroud will be worn after death by the deceased. This is part of his postmortem prestige, but since cloth is at a premium, this debt will have to be repaid at high interest rates, and around the shroud in future years will center most of the haggling for repayment. Forehanded kinsmen of the proper category see to it that they are prepared with a shroud of high value. Their eyes are on future profit. As a result the best pieces of cloth in the community are being continually put out of circulation. With the onset of death the female kin begin to prepare rice and corn. Not more than one or two women stay near the corpse to wail.

The spouse of the deceased is felt to be in so much danger from the dead that he leaves the immediate vicinity and stands guard with unsheathed knife, to prevent the ghost from carrying him off. For the following night and day he should not sleep. (These precautions are observed by both sexes.) Burial usually occurs not more than twenty-four to thirty-six hours after death, and it is courteous of friends to rush the procedure by urging the family on with comments about the stench of the body.
